## INFORMATION

### 1. Dispense Set-up

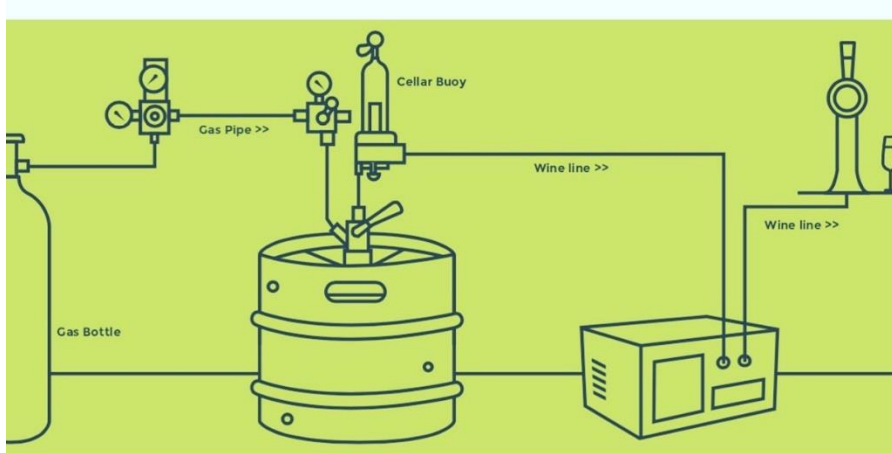

Below is a basic drinks dispense diagram showing how to install a single point of draught/keg wine or beer on a typical UK set-up.

- The GAS or air goes → primary valve → secondary valve → into the side entrance of the keg connection/coupler.
- The LAGER runs from the keg → cellar buoy → to the inlet of the cooler → from the cooler into the lager tap.

## Information Pack: LAGER ON TAP Dated: 2018

There is usually a flow controller between the outlet of the cooler and lager tap to adjust how fast the lager is poured.

### 2. Lines

The line length is very important for wastage, we recommend the following:

- Optimal length = 2 metres
- Satisfactory length = 5 metres
- A gas pump on much longer lines would be beneficial albeit, lead to wastage.

It is recommended that you clean your lines with line cleaner every 10 days.

### 3. Gas & Pressure

Pressure Types

- Kegstar keg → Co2 recommended  
(Mixed Gas or Air has a very short shelf life- 3-5 days)

The maximum dispensing pressure is 1.2 bar / 17 PSI.

### 4. Branding

The Sparkling Wine Co. will provide circular badges for your fonts. Glassware can also be provided for fixed bars who plan to have a regular supply.

### 5. Delivery Dates & Methods

The **cut-off point for Next Day delivery is 10am for pallets**. Due to the weight of the kegs the standard delivery charge is £40 per pallet (no minimum or maximum quantity)

### 6. Collection of Empties

The keg is to be collected once used – inform Kegstar when kegs & casks are ready for collection via smart phone app, 0800 534 5000, social media or [rent@kegstar.com](mailto:rent@kegstar.com).
